PROFESSIONAL SUMMARY

Computer Science graduate and independent developer seeking entry-level AI, ML, and NLP roles. Built a domain-specific assistant prototype using Qwen 1.5B, Retrieval-Augmented Generation, FAISS retrieval, CrossEncoder reranking, grounding, NLI validation, FastAPI, SQLite, and Flutter. Independently published three Android applications on Google Play and open to relocation, onsite, hybrid, or remote opportunities.

TECHNICAL SKILLS

Languages: Python, Dart

AI and NLP: Large Language Models, RAG, embeddings, semantic search, FAISS, CrossEncoder reranking, grounding, NLI, prompt engineering

Backend and Data: FastAPI, REST APIs, SQLite, data validation, API integration

Mobile and Tools: Flutter, Android, Git, GitHub, Firebase Crashlytics

SELECTED PROJECTS

Vastu Domain Assistant | Python, Qwen 1.5B, RAG, FAISS, FastAPI, SQLite, Flutter | [Case Study](#)

- Designed a multi-stage NLP pipeline covering knowledge ingestion, chunking, embeddings, FAISS retrieval, CrossEncoder reranking, response generation, and validation.
- Added grounding, Natural Language Inference, direction validation, persistent chat memory, and client ownership boundaries to improve answer control and data isolation.
- Exposed the workflow through FastAPI, stored conversational state in SQLite, and connected the prototype to a Flutter client.

Vastu AI Mobile Application | Flutter, Dart, Android | [Google Play](#)

- Independently designed, built, and published a Vastu guidance application with more than 1,000 Google Play downloads.
- Implemented responsive compass, room guidance, bilingual content, local reports, and offline-first data handling for Android users.

Astro Panchang Calendar | Flutter, Dart, Android, Swiss Ephemeris | [Google Play](#)

- Built and published a location-aware Hindu calendar with Panchang, Tithi, Nakshatra, Hora, Choghadiya, sunrise and sunset, festival, and planetary calculations.
- Implemented core offline access and interfaces in English, Hindi, Marathi, Gujarati, and Bengali.

PDF Reader Secure and Offline | Flutter, Dart, Android | [Google Play](#)

- Built and published an offline-first document utility supporting PDF viewing, merging, splitting, page rotation and reordering, password protection, and on-device image tools.
- Kept document operations on-device and added PIN or biometric app locking to support private, cloud-free workflows.

EDUCATION

Bachelor of Technology in Computer Science and Engineering | October 2021 - June 2025

Parul University | CGPA 6.65 out of 10
